Université de Pau, France

INOVFARMER Better fruit from smart business MED-LINKS PRIMA PARTNERSHIP FOR RESEARCH AND INNOVATION IN THE MEDITERRANEAN AREA FAIRCHAIN RESILINK

FIRST SYMPOSIUM MEDITERRANEAN FRUIT: HUB FOR INNOVATION

16-17 May 2024

Hybrid Event

INRAE, Avignon- FRANCE

Towards more frequent crisis?

The #COVID19 pandemic is disrupting livelihoods, food supply chains, and people's access to food and basic services.

 Food and Agriculture Organization of the United Nations

This project is part of the PRIMA Programme supported by the European Union

<https://prima-med.org/>

- ⦿ Partnership for Research and Innovation in the Mediterranean Area
- ⦿ Call: Section 2 Multitopic 2021
- ⦿ Thematic Area 3-Agrofood chain

- ⦿ Topic 2.3.1 Increasing the resilience of small-scale farms to global challenges and COVID-like crisis by using adapted technologies, smart agri-food supply chain and crisis management tools

- ⦿ Implementation: June 1st, 2022 → May 31st, 2026 (4 years)

 ACICT: Arab Company for Information and Communication Technology Egypt	 ARC: Agricultural Research Center Egypt	 INRA: National Institute of Agronomic Research Morocco	 Orange France	 UMCM: University Mohammed-Chérif Messaadia Souk-Anras Algeria	 USMS: University Sultan Moulay Slimane Morocco	 UPPA: University of Pau & Adour Country coordinator France	 WAZIUP eV: WAZIUP association associated partner Germany

Smallholders are more vulnerable! **RESILINK**

- Most (84%) of the world's 570 million farms are smallholdings
- Smallholder farmers: first to be impacted by climate change, unexpected crises. They are very economically fragile!

Increase smallholder's resilience?

- RESILINK will increase smallholder's resilience by providing continuity of access to both resources and markets in crisis situations
- Digital platforms to promote localized usage of resources

What is a digital platform?

- Very generally, it is a software component to enable services, interactions and possibly transactions among users
- Digital platform = more flexibility than a standalone application
- Many well-known "applications" are actually digital platforms offering key functionalities: user management, database, content storage & management, payment, ...
- Web site or mobile apps are usually "front-end" to the platforms

Why digital platforms are useful?

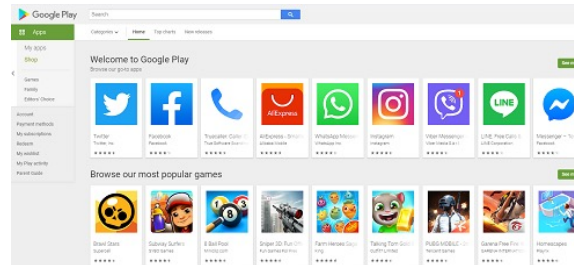

- ⦿ Social media platforms, knowledge platforms, sharing platforms, service platforms, ...
- ⦿ They can create communities! Community of Facebook users, of WhatsApp users, of AirBnB users, ...
- ⦿ For instance

12:00h - 12:10h — OC 04 - Argan fruit quality improvement through genetic selection 

- ⦿ We could create a community for Argan fruit lovers!
- ⦿ People in the community could communicate, exchange, showcase, advertise, trade, sell, buy, rent, ...
- ⦿ **They are a key element of digital transformation**

Going digital: digital transformation

- Create innovative & adapted digital services

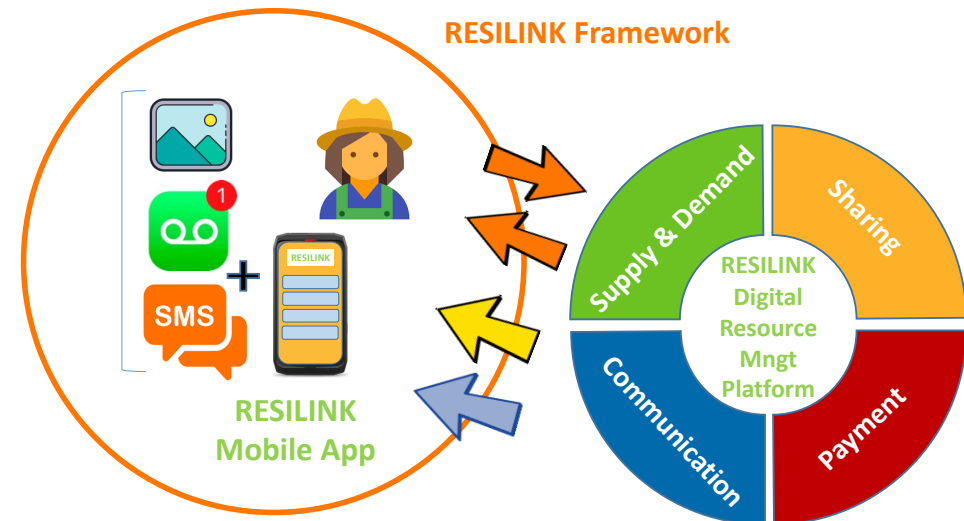

- Digital platforms are a key element of digital transformation for smallholders and the whole agri-food value chain
- BUT, smallholder farmers have less digital technologies experience
- For the smallholder communities, it is important to make digital technologies attractive & accessible → digital transition

The RESILINK digital platform

- Will enable **real-time exchange of information** on territorial resources and supplies & demands; **connecting smallholders to new supply**, sharing **opportunities and distribution channels**

- 1 Improve the agri-food value chain by optimizing usage of local resources, generalizing local resource sharing approach and facilitating territorial markets
- 2 Develop distributed digital resource management platform for real-time exchange of information on territorial resources and supplies & demands; connecting smallholders to new supply, sharing opportunities and distribution channels
- 3 Use cutting-edge digital technologies to connect fields and farms resources, automatize and add intelligence in the agri-food value chain to provide simple application interfaces adapted to smallholders

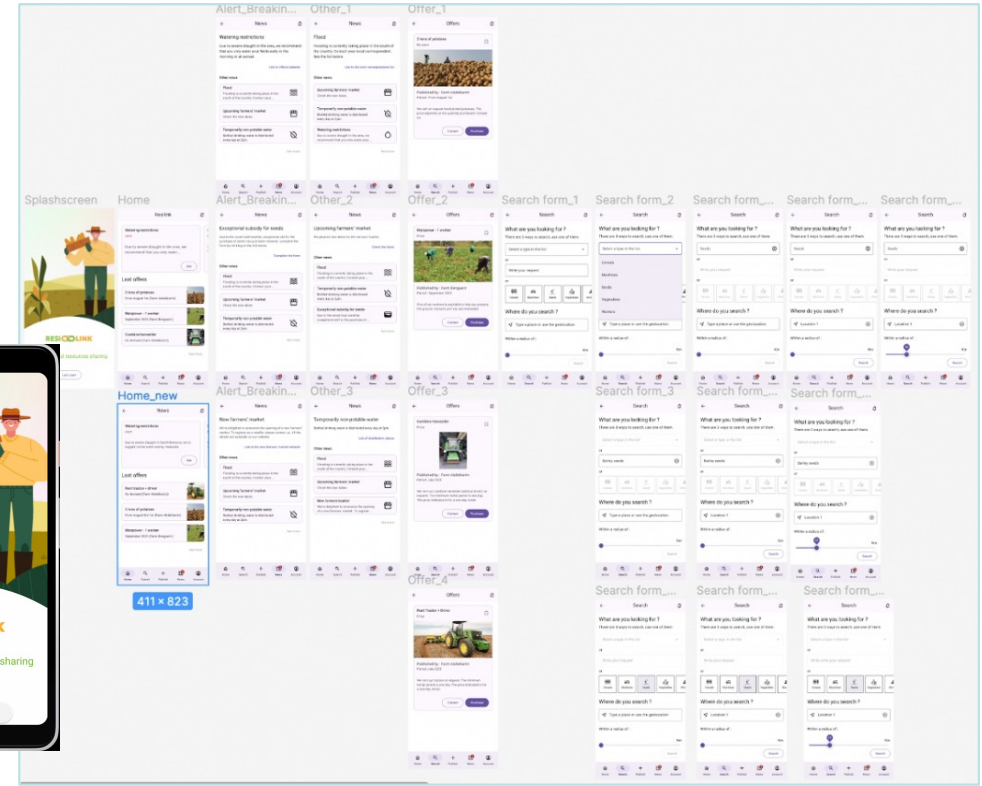

MEET THE NEEDS! RESILINK use case

- ⦿ In crisis situation, smallholders want to maintain continuity
 - ⦿ Keep selling their products
 - ⦿ Maintain access to inputs/products/services related to their activities
- ⦿ BUT, it is **NOT ONLY "Yet Another E-commerce Apps"**
- ⦿ They may want to
 - ⦿ Discover locally available resources/services related to their activities
 - ⦿ Diversify beyond their traditional activities, distribute side products
 - ⦿ Have more interactions with local agriculture services/agencies
 - ⦿ Be informed of the latest news and/or regulations from official sources
- ⦿ Perform all the above-mentioned tasks without changing the way smallholders interact, negotiate & conclude transactions
- ⦿ **A new digital platform must MEET THE NEEDS!**

... and increase/ensure acceptability!

- ⦿ Test & validate the new & innovative functionalities
- ⦿ Test & validate User Experience & User Interface (UX/UI)

No "one app fits all"

- Each digital platform will create its community
- Sharing between communities is usually not proposed in traditional platforms → competition, isolation

LinkedIn

Facebook

AirBnB

Instagram

WhatsApp

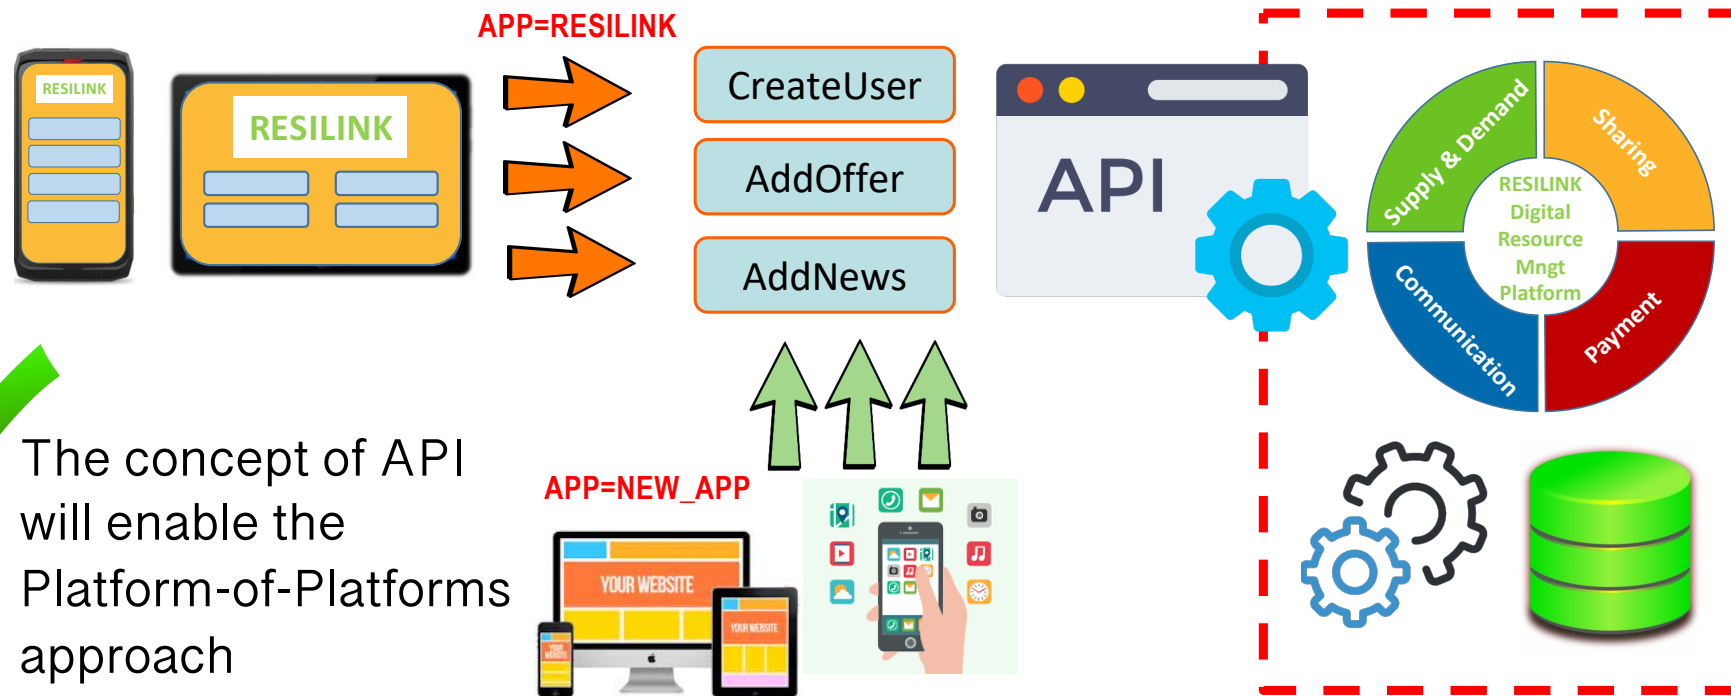

YouTube

- Enabling a platform-of-platforms approach** will promote a much wider and appealing ecosystem
- Platform-of-platforms approach will allow
 - Specialized platforms to better manage specific agricultural sectors
 - Discover resources/services from other platforms → no isolation

API: key to large adoption!

- ⦿ API: **Application Programming Interface**
- ⦿ Digital platforms > Applications thanks to API-oriented design
- ⦿ → All functionalities/actions are accessible through an API call

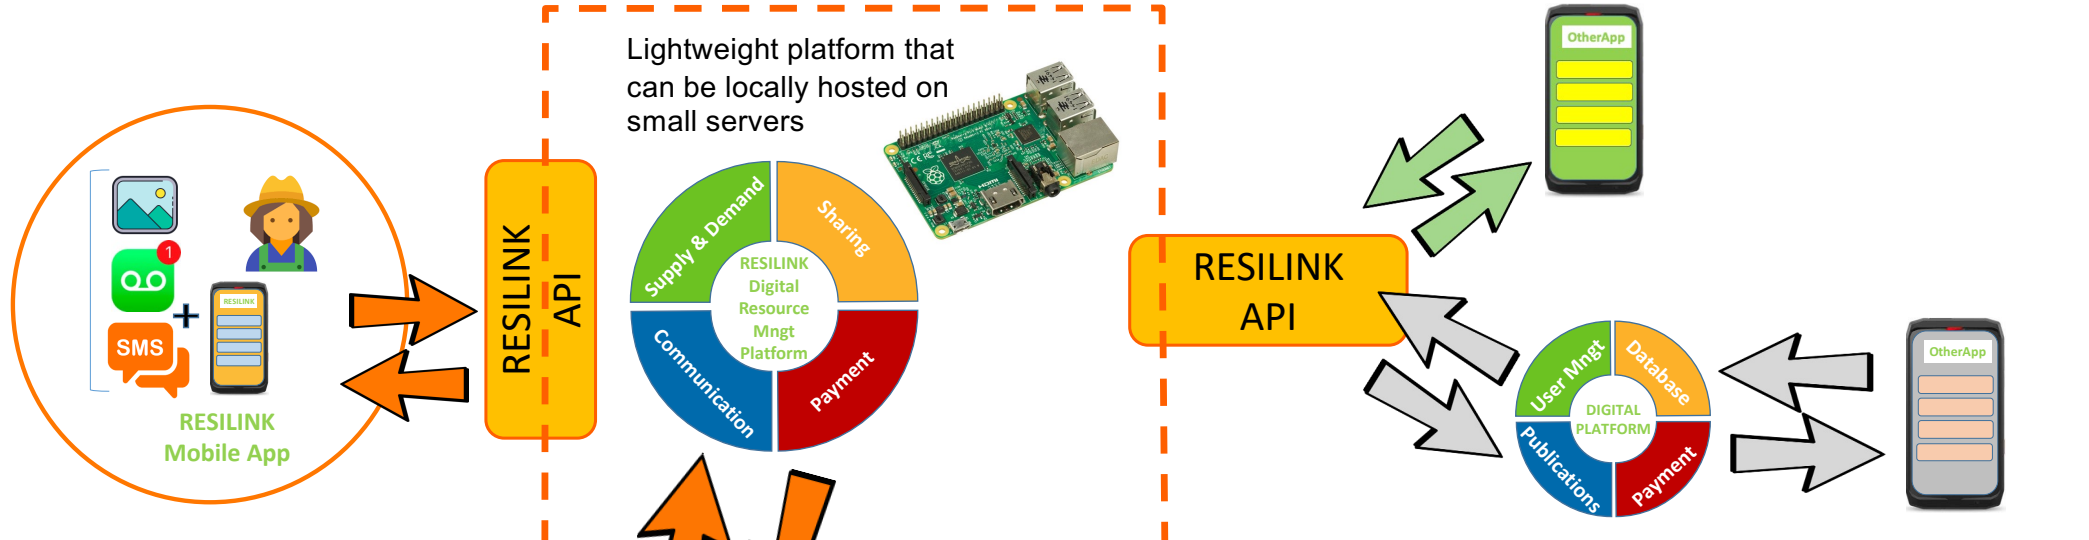

The concept of API will enable the Platform-of-Platforms approach

Stimulating local innovation?

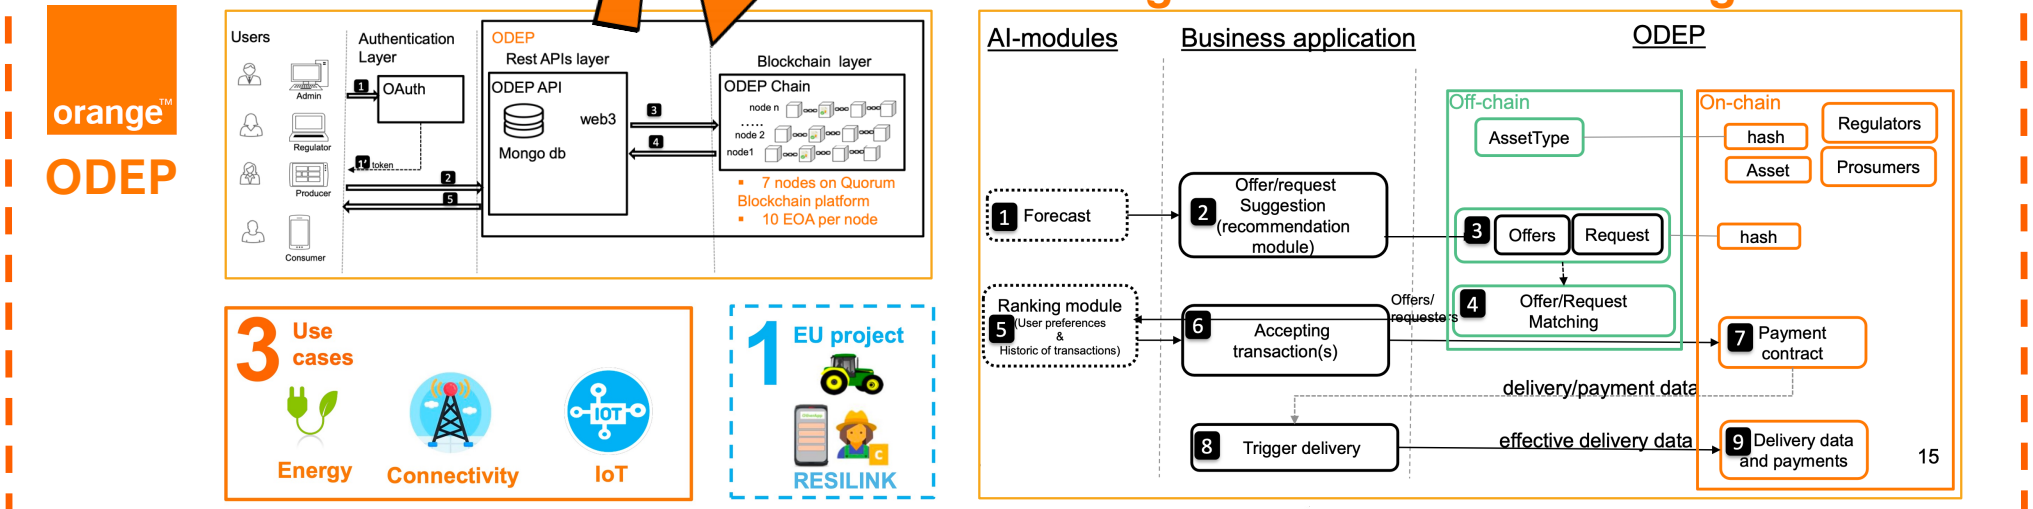

- ⦿ Creating a digital platform is a major development effort!
- ⦿ A new platform will also need to build its own community!
- ⦿ Entrepreneurs may step back because of these challenges!

- ⦿ RESILINK will design and propose an **Application Programming Interface (API)** for the development of new resource sharing platforms
- ⦿ The open API will **reduce development time & complexity** of new platforms
- ⦿ All platforms **can fully inter-operate** and a new platform can benefit from all the other platforms' communities by sharing users & contents

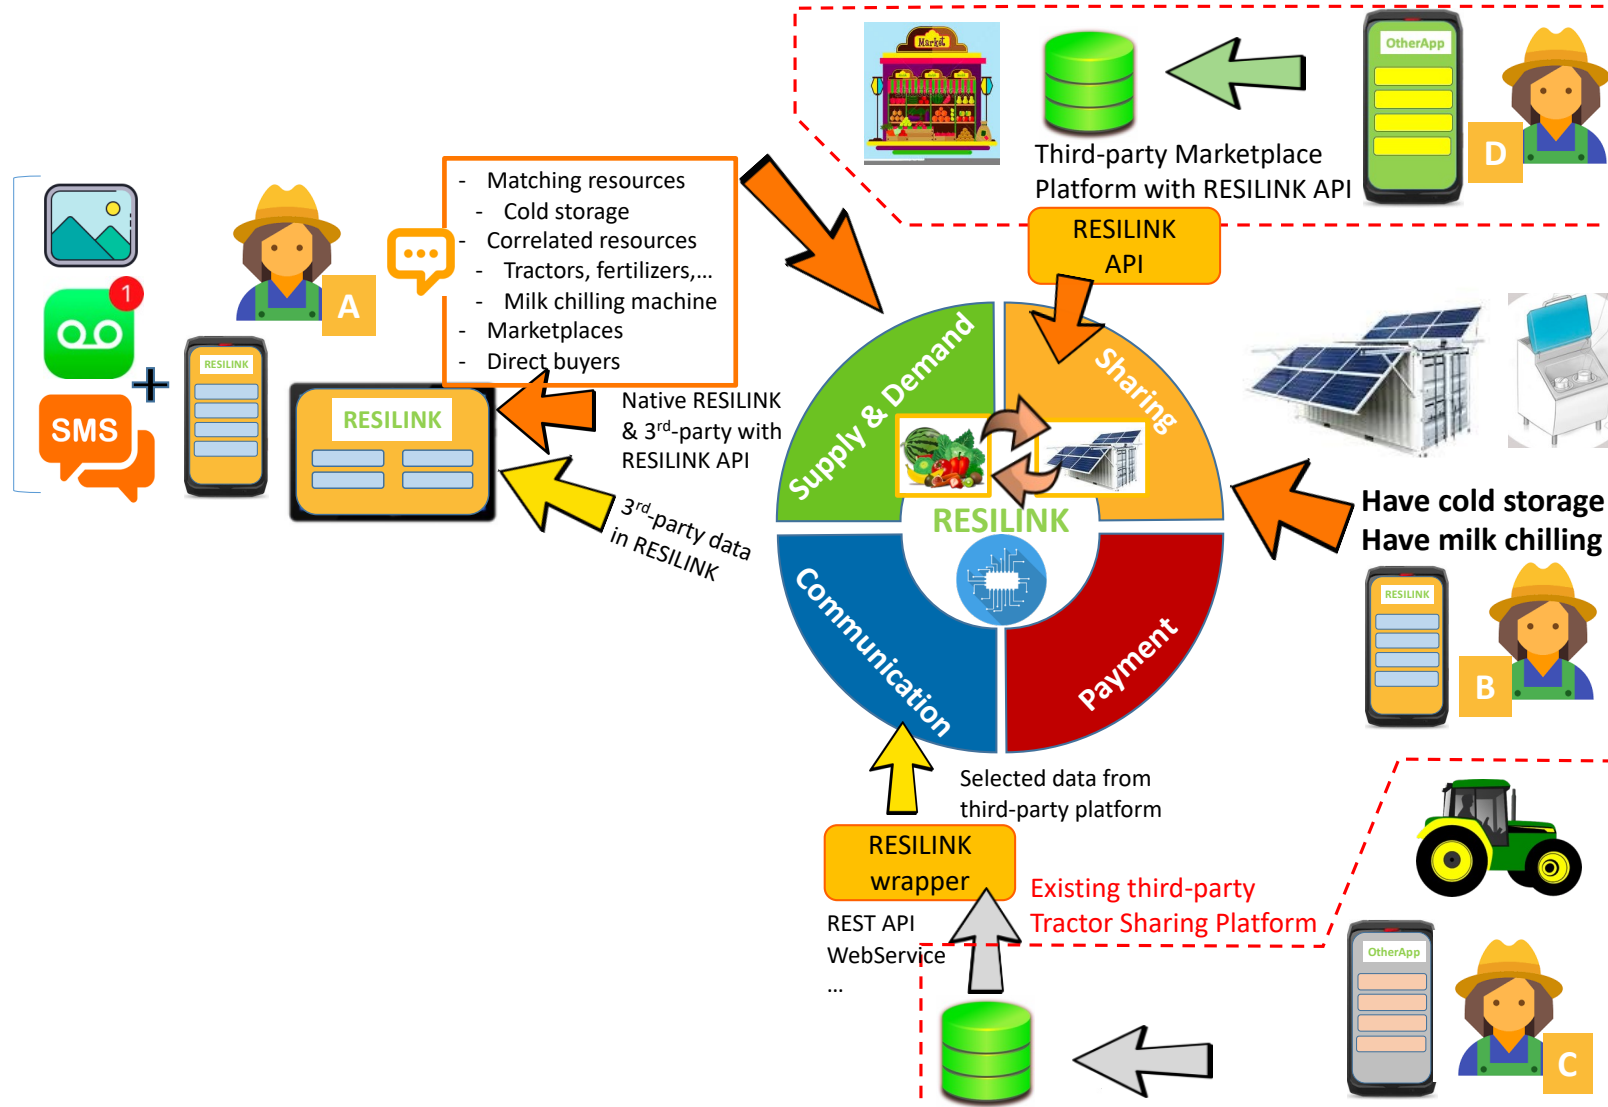

RESILINK's building blocks

Orange Decentralized Exchange Place

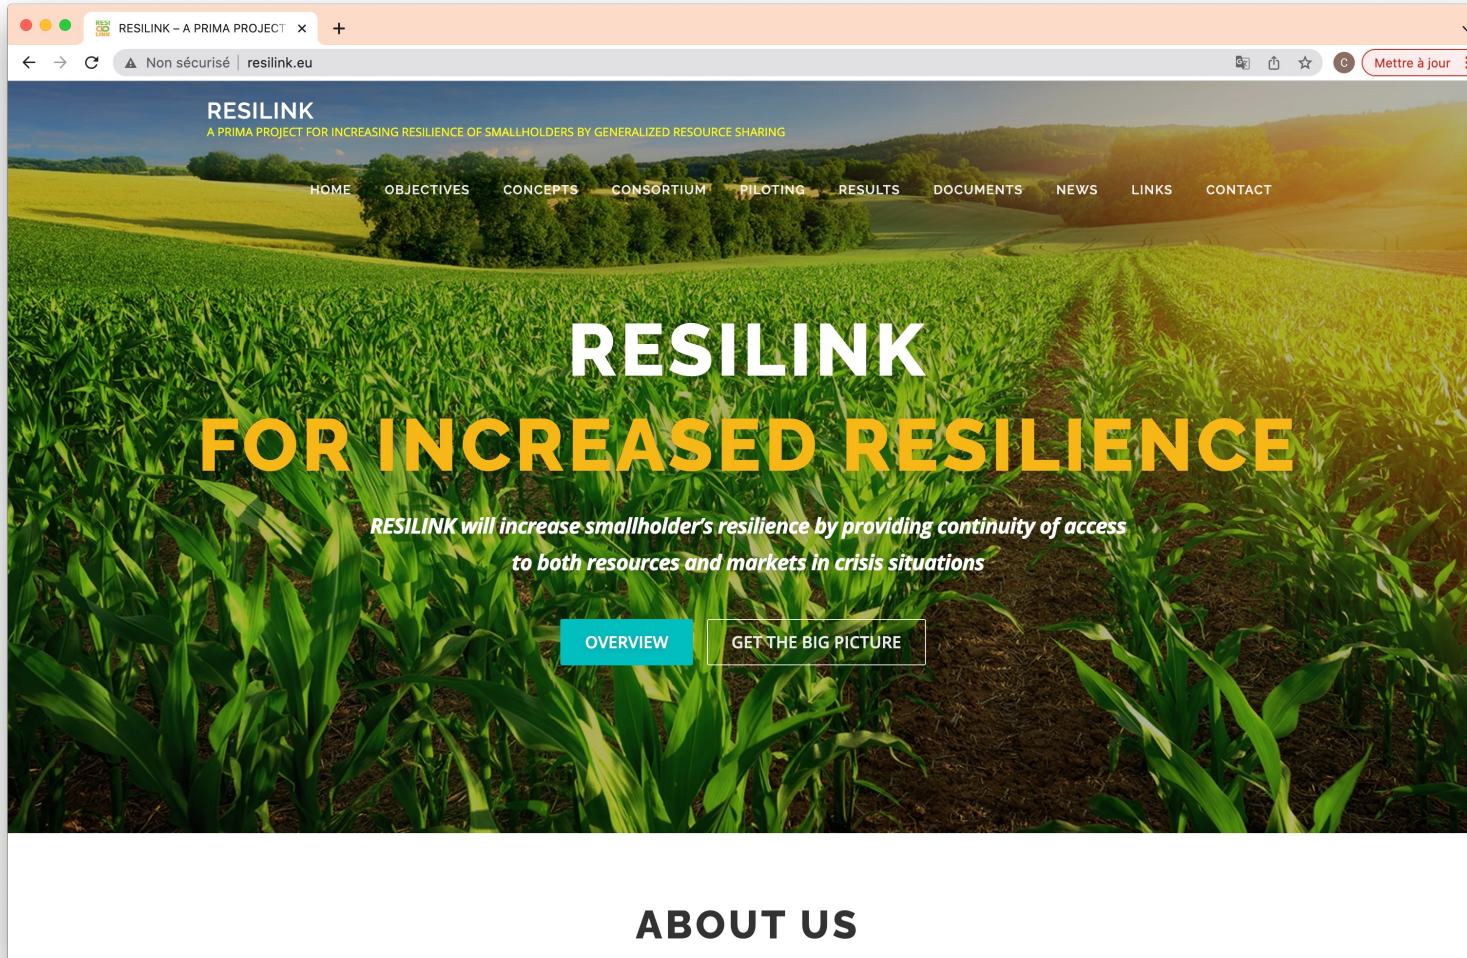

RESILINK big picture

Conclusions

- ⦿ Digital platforms can contribute to the overall ambition to innovate in the whole agriculture/farming value chain
- ⦿ However, targeting smallholder communities is not simple
 - ⦿ Technology readiness
 - ⦿ Technology acceptability
 - ⦿ Technology cost
 - ⦿ Technology simplicity
- ⦿ Designing a good digital platform needs transdisciplinary research ...
- ⦿ ... and transdisciplinary needs a lot of meetings & discussion!
- ⦿ Sometime, transdisciplinary research may lead to frustration!
 - ⦿ Tradeoff in complexity & accuracy
 - ⦿ Tradeoff in results & impacts
